About Tekion

Tekion Corp is a cloud technology company founded in 2016 by former Tesla CIO Jay Vijayan. The company is headquartered in Pleasanton, California, with a major technology center in Chennai, India.

The platform, Automotive Retail Cloud (ARC), is an end-to-end, cloud-native solution designed for automotive dealerships. ARC integrates multiple modules such as CRM, DMS, digital retail, service management, analytics, and AI-powered insights. Tekion also offers Automotive Enterprise Cloud (AEC), which connects OEMs and dealerships through digital tools like configurators, online payments, and advanced analytics.

My Interview Process and Experience

The Tekion recruitment journey was a well-structured process spread across multiple rounds, each designed to evaluate not just my technical skills but also my ability to think critically, solve problems efficiently, and stay composed under pressure.

Round 1: Online Coding Round

- **10 MCQs** covering DSA, DBMS, and Operating Systems.
- **1 SQL query** to test database knowledge.
- **1 medium-level DSA coding problem.**

From this round, I was shortlisted for the next stage.

INTERVIEW DAY

The big day started with a surprise—**two consecutive coding rounds** that turned out to be elimination stages. These rounds pushed us to prove our skills in both **frontend design** and **backend logic**, highlighting our ability to think fast and stay focused.

Round 2: Coding Round - 1 at CUIC

This was the first round on the **interview day**. It had three parts:

- A **frontend-based task**.
- One **medium-level DSA coding question**.
- One **hard-level DSA problem**.

Around **20 candidates (including me)** were shortlisted from this stage.

Round 3: Coding Round - 2 at CUIC

This round tested my ability to write efficient code and reduce time complexity. I solved:

- A **string-based DSA problem**. Similar to leetcode problem:
<https://leetcode.com/problems/word-break/description/>
- Another problem where my **first solution used arrays**, but I realized it was inefficient. To optimize, I restructured my logic using a **queue**, which reduced the overall time complexity and made the solution much faster.

From here, **10 candidates** moved ahead, and I was one of them.

Round 4: Technical Interview

The technical round was conducted by two interviewers and focused on testing both my core fundamentals as well as the depth of my project knowledge.

- **Frontend** related questions.
- Code snippet analysis – explain the **output and logic**.
- **C++ and Java concepts-based questions**.
- Projects mentioned in my resume – with focus on APIs, tech stack, and implementation.
- Questions about my **certifications** and learnings.

This stage was very interactive and practical. Out of 10, **5 candidates including me** were shortlisted for the final HR discussion.

Round 5: HR Interview

The HR discussion was more about my personality, career goals, and motivation to join Tekion. Questions included:

- **Self-introduction.**
- What do you know about Tekion?
- Why do you want to join Tekion?
- Behavioral questions like:
 - Importance of mentorship.
 - My perspective on **teamwork and team spirit**.

At the end of the day, the selected candidates were announced. I was among them and received the offer.

I received:

- A **6-month internship**.
- Conversion to **Full-Time Employment (FTE)** upon successful completion.

Key Suggestions and Tips from My Experience

Preparation

- Don't lose hope – be confident in what you know.
- Be the **best in the areas you're strong at** and highlight them.
- Practice **LeetCode problems** regularly.
- **Revise last-minute concepts** from GeeksforGeeks and other online resources for a quick brush-up.
- **Balance coding with subject knowledge** – parallel preparation in core subjects like DBMS, OS, and Computer Networks is equally important.

Interview Strategy

- Be very clear about everything you include in your **resume** – expect questions on each point.
- Answer in **crisp, concise words**.
- Using the right **technical keywords** is more impactful than long explanations.
- Stay confident and structured in your responses.
