

Gokul.V – Technology Engineer Interview Experience at Thirdwave Japan

About the Company

Thirdwave Japan is a renowned technology solutions provider focused on innovation in hardware and software systems. Headquartered in Tokyo, the company has a global presence and offers cutting-edge tech solutions in embedded systems, AI, robotics, and industrial IoT. With a strong emphasis on quality, precision, and continuous improvement, Thirdwave collaborates internationally to develop smart solutions aligned with Japan's legacy of technological excellence.

About the Role

Technology Engineer at Thirdwave Japan involves hands-on contributions to software development, embedded systems, and R&D initiatives. The role is expected to contribute toward real-time system development, debugging, and deployment in live environments. Collaboration with Japanese engineers is a core part of the role, promoting cross-cultural work ethics, continuous learning, and problem-solving through advanced tools and techniques.

Interview Process

The selection process was simple and direct, with a single interview round where 4 candidates were interviewed together in a group setting.

The evaluation was based primarily on:

- How well we communicated our thoughts and ideas
- How confident we appeared while answering
- The level of willingness and enthusiasm we showed toward working and adapting to life in Japan

The process was interactive and focused more on personality, clarity, and passion, rather than technical depth.

Interview Questions

The panel mainly focused on understanding:

- Self-Introduction: A crisp summary of education, key strengths, and career aspirations.
- Internship Experience: Described the domain, responsibilities, tech stack, outcomes, and technical learning.
- Major Project Explanation: Covered the problem statement, tools used, challenges, and results.

- Interest in Working in Japan: Expressed admiration for Japanese tech culture, learning work ethics, and enthusiasm for innovation.

Interview Experience

- The atmosphere was formal but encouraging.
- Though it was a group interview, each candidate was given a fair chance.
- The panel appreciated clarity in answers, sincerity, and willingness to adapt to Japanese culture.
- No technical coding test was conducted; the focus was on communication and technical clarity.

My Preparation

1. Covered all the basic concepts like OOPs, DSA, SQL, OS, and Computer Networks.
2. Developed a structured mind map for the projects mentioned in my resume, which helped me explain them effectively during the interview.
3. Attended mock interviews to build confidence and improve communication skills.
4. Completed a Full Stack Web Development course, which served as an additional skill to boost my resume.
5. Learned more about the company and gave my own few ideas that could be implemented for their growth.
