

Placement Experience – TRIMBLE

Online test(Codility):

- 2 coding questions (matrix, string)
- Coding questions were based on string and matrix concepts. If you covered arrays and strings thoroughly then you can easily solve these questions.
- Test was for one and half hour
- They provided us with Trimble'AI during the test for syntax clarification and to clarify our doubts regarding the questions or the approach by which we are gonna solve.

Interview:

- First round:

Formal Self introduction and a walk through of my profile.

During my ppt itself they told us for the first round they will ask questions from DSA, DBMS, OS, OOPS so that they asked me to choose any one from these to start the interview.

I started with OOPS (where they asked me to give real life examples for abstraction, polymorphism in the interview room itself)

In DSA(They asked me which Data structure will be suitable for storing 1000 nodes and also accessing it have to be easy for that data structure and also the data structure can also be scalable in future - BST tree)

In PUZZLES (they asked me to solve 9 coin problem in 3 iteration and then they asked me to optimise it for 2 iteration)

In DBMS(They asked me to explain normalization concept)

In SQL (asked me to solve a question - i solved it using self join)

In OS (They asked me "What is semaphore")

- Second round(System design):

I was asked to explain about my projects(I explained my recent SRP project- Unity Connect)

They asked how innovative I am while doing projects- I explained about my stack animation model for this question.

They asked me to explain the Dijkstra algorithm with an example.

They asked some situation based questions like (Being a team leader how will you assign work to your team mates, How will you plan to manage your project deadlines)

They asked my opinion about success and how will i react while someone criticise me

They asked me some questions regarding my Club Activities (CSAU - Deputy head of HR and Logistics, GT- Mentor for Tamil article writing, CTF, Saas - volunteer, coordinator during cultural).

- Third round(HR):

This is basically general questions about you
and your profile
And some family background questions.

They asked me which approach I tried to solve the online test questions.

They asked about the codility platform experience and Trimble's AI experience.

They asked about my strengths and weaknesses.

General talk regarding family support and relocation possibilities.

Tips for your interview:

- Understand Your Resume Thoroughly:
Be prepared to discuss every line on your resume — projects, internships, skills, and achievements. The interviewer may pick any point to test your depth.
- Be Clear About Your Strengths and Weaknesses:
Have 2–3 genuine strengths and 1–2 weaknesses ready. Be honest, but show that you're working to improve your weaknesses.
- Practice Basics from Core Subjects:
Revise your fundamentals — the interviewer often checks clarity in core concepts rather than advanced topics.
- Know Your Projects Well:
Be ready to explain your project flow, tools used, your contribution, and the impact. Practice explaining it in simple, confident language.
- Dress Professionally:
First impressions count. Wear neat, formal clothes and maintain proper grooming.
- Be Honest When You Don't Know:
If you don't know an answer, admit it politely instead of guessing wildly. Say something like *"I'm not sure right now, but I'd love to learn more about it."*

- **Keep a Positive Attitude:**

Even if one round doesn't go well, stay positive for the next. Interviewers notice how you handle pressure and setbacks.

- **Ask Thoughtful Questions:**

At the end, when given a chance, ask about the company's work culture, team, or upcoming projects. It shows curiosity and enthusiasm.
