

Placement Experience – Verizon

- Shreya Elizabeth Franklin

About the Company

Verizon Communications is a telecommunications company and one of the world's leading providers of technology, communications, and network solutions, consistently ranked among the Fortune 500 companies. Founded in 2000, Verizon serves over 100 million wireless customers and delivers broadband, fiber-optic, and 5G connectivity to businesses and consumers across the United States and beyond. Verizon has the largest 4G LTE network in the U.S. It is headquartered in New York and in India, it has offices in Chennai, Bangalore and Hyderabad.

About the Role

The role that they were hiring for was Engineer 1 (Software Development). When asked more about the role, the HR said that you will be working with various technologies and you should be open to work in various domains.

Placement Process

ROUND 1: Online Assessment

It consisted of 3 parts. Firstly, we were asked to type a composition of about 190 – 250 words. The topic that I got was 'Do children teach us to be better people?'. It was a general verbal testing round and not technical. Next, there was a coding round where they asked 2 questions which were of easy-medium level. The last part of the assessment was a verbal/communication testing round where they asked vocabulary and grammar questions.

ROUND 2: GROUP DISCUSSION

This round assesses your communication skills and the way you're putting forward your opinions. Don't be too forceful and make sure to add in your points at the right time. Even if you speak for a lesser time, it's okay but what you speak and the effect it makes matters. Be sure to give others also a chance to speak and never cut a person in between. My panel had 13 members and the moderator was a senior HR of the company with over 7 years of

experience. He told us to start off the discussion with a general topic of our choice. I spoke twice during the whole discussion but the points I put forth were of impact. 8 people were selected to the next round.

ROUND 3: TECHNICAL INTERVIEW

The technical interview went well. The interviewer was friendly and made me feel at ease. He browsed through my resume and asked about my former internship experiences, hobbies and the current project that I'm working on.

I was given a scenario of the working of Swiggy and asked to modify the database if items from multiple restaurants could be ordered simultaneously. I drew the change in the database for the given modifications.

Finally, he asked whether I had any questions. I asked him his experience in the company and whether we could explore different domains on a rotation basis. He answered my questions clearly.

ROUND 4: HR INTERVIEW

In this round, I was asked to tell something about myself that is not mentioned in my resume and I was asked basic questions about my location preference and my knowledge about the company.

I asked questions in this round too regarding the work culture and the growth in the company. Ask questions, don't hesitate as this will show your eagerness to work in the company.

15 people were selected by the company and they sent us a confirmation email on the same day.

Tips and Tricks

- Be confident and communicate well
- Focus on verbal knowledge as well
- Know your resume well and be yourself
- Technical topics: Data structures and DBMS

All the best!
