

About the company:

Vivriiti Capital is a FinTech company, which, around the time that they came for hiring, was considered as a startup company. Now it's been 7 years since the start of the company, so it's not much of a startup. It's good to get your early experiences in startups like this.

Role: Software Engineering

Preparation Strategy:

I only prepared for the DSA questions and the projects that were there in my resume.

Placement Drive Exp:

First round - 1 easy level leetcode question and a medium level leetcode question(i do not remember this question, but it was something like grouping up palindrome strings)

Second round - Simple DSA questions, reflection upon my fundamentals, and my projects in my resume

Tips and Tricks:

Well, I do not have anything to say on this. You guys know what to do, so keep at it!

In the end, it's just a game of luck. You get placed in a good company if you are lucky and crafty. It also depends on your goals. If you are willing to pursue higher education, this company is more than enough. But if not, then I would maybe suggest you to hold back on this option, and try for other companies. This company is pretty good for freshers, though.
