

INTERVIEW EXPERIENCE

NAME : VENKAT KARTHICK P

REG NO : 2018115125

COMPANY : WALMART

MONTH & YEAR : SEP 2021

ROUND 1 : (ONLINE TEST)

It is conducted on the hackerearth platform. It consists of 10 technical mcqs and 2 coding questions(20 mark and 50 mark).

The coding questions are:

1. Modulus of 2 hexadecimal numbers. (20 marks)
Link: [Modulus of two Hexadecimal Numbers](#)
2. Longest subsequence of ones formed by changing at most k zeros(50 marks)
Link: [Longest subsegment of '1's formed by changing at most k '0's](#)

I solved this question using the sliding window approach.

I solved only the 50 mark question.

ROUND 2 : (TECHNICAL INTERVIEW 1)

It is conducted in zoom. It is a 45-50 minute interview. The interviewer wants me to introduce myself. And then I explained my project to him.

He asked the basics of OOPS. I explained the concepts like abstraction, encapsulation, polymorphism and inheritance with an example.

Then he asked me to share the screen and to open the editor of my own choice. I was given 2 basic coding questions.

1. Find whether the given number is prime or not. After I typed the code, he asked why I iterated from 2 to $n/2$. After I convinced him, he asked if there are any optimizations possible and why? I said we can iterate from 2 to $\sqrt{n}$.
2. Find whether a given string is palindrome.

As I quickly solved the questions, he asked me 2 aptitude questions.

1. Pipes A and B can fill a tank in 5 and 6 hours respectively. Pipe C can empty it in 12 hours. If all the three pipes are opened together, then the tank will be filled in?
2. The 60 litre mixture contains 90% milk and rest water. If 10 litres of milk is added to the mixture, the amount/percentage of milk in the mixture.

In DBMS, he asked me the differentiation between having and where clause.

ROUND 3 : (TECHNICAL INTERVIEW 2)

It is also conducted in zoom. It is also a 45-50 minute interview. I was given 2 coding questions. I can code in an IDE of my own choice.

The questions are:

1. Given an array, separate the odd and even numbers and make the odd numbers appear first without using extra space. I told her the two pointer approach and coded it. It passed the test cases which she gave.
2. Given a number, we want to give the next safe number. A number whose binary representation does not have consecutive ones is called a safe number. I coded the brute force approach which passed all test cases she gave. I explained the optimal approach.

She asked some questions in OOPS and OS. Sample questions:

1. Difference between process and thread.
2. Explain about Mutual Exclusion and semaphores. She also wants me to write a small code snippet of mutex lock.

The interviewer was so friendly and extracted my best.

ROUND 4 : (HR INTERVIEW)

It is also conducted in zoom. It is a 30 minute interview. It was a bit tricky to me as I was not prepared for it.

Questions like:

1. Tell me about yourself which is not in your resume.
2. Which do you prefer? SmartWork or HardWork
3. Your greatest failure in life and how you overcame it.
4. Your opinion about teamwork.
5. What motivates you?
6. Your hobbies? I said reading books. And we discussed some of the books which I read.
7. Why walmart?
8. Why did you choose this course?

She asked to explain about one of my projects. Then she asked some questions from my resume.

16 students got selected and I was one of them.

NOTE : Be relaxed and try to give your best to each question.

ALL THE BEST
