

WELLS FARGO INTERVIEW EXPERIENCE(INTERNSHIP)

-Dharaniraj VM [2022115058]

About the Company:

Wells Fargo & Company is an American multinational financial services company with a significant global presence. The company operates in 35 countries and serves over 70 million customers worldwide. It is a systemically important financial institution according to the Financial Stability Board. It is considered one of the "Big Four Banks" in the United States, alongside JPMorgan Chase, Bank of America, and Citigroup.

Number Of Rounds: 4

1. Online Test
2. Interview Round 1
3. Interview Round 2 (Senior Manager Round)
4. HR Round

Online Test:

The online round was conducted in SHL (Aspiring Minds) platform. This round was conducted in our department lab. The round consisted of 3 sections namely verbal aptitude, business aptitude and coding. Both aptitude sections had MCQs which had to be answered compulsorily, and free navigation was prohibited. The first two sections were common for all whereas the third section was different for all.

1. Verbal Aptitude: 12 MCQs to be solved in 15 minutes. Questions focused on grammar corrections, vocabulary, and 4-5 reading comprehension-based questions

2. Business Aptitude: 14 MCQs to be solved in 25 minutes. Pie charts bar charts and candlestick charts were given. Analytical questions will be asked from that. The questions were too long and hence I was unable to complete the last 4,5 questions.

3.Coding round 1:(40 minutes)

The questions will be too long. But the underlying concept will be very easier. Please don't waste much time on the question. The difficulty level of both the questions were easy.

The first question was to find how many characters are at the same position even after string reversal. The question was not this direct.

The second question was "Given a number n , the task is to find the smallest number that can be made out of it by making suitable rearrangements. The length of the number should be same. "

Eg: If the number is 743, the smallest number you can make is 347.

Coding round 2:(10 minutes): A detailed explanation about the Seven Bridges of Königsberg problem was given. The task was to determine, given a starting vertex V , a list of edges E , and a visited array, whether the problem is solvable (returning true or false).

22 students were shortlisted for the interviews, which took place at MIT

Interview Process:

The interview process consisted of three rounds: Here are some of the questions I can recollect for each round:

Round 1:

I was firstly asked to introduce myself before which the interviewer had gone through my resume well. Then he started

asking me about a project on Graphs that implemented vertex cover algorithm. The interviewer understood that I knew the concept well. But he wasn't satisfied with my application. I accepted the shortcomings of our project. Accept your mistakes if pointed out at the interview. I included teaching as a hobby in my resume, So he asked me to give me a five-minute lecture on Data structures. Then he asked me some questions on distributed databases as my resume had MongoDB in it. He also taught me some concepts on Distributed databases later. Then he asked me about some graph algorithms. I explained them well. The interview took place for about 30-40 minutes.

In general, some questions asked in the interview was related to

- Some popular algorithms and their performances (time complexity)
- Questions were asked from DBMS (to write SQL queries)
- Operating systems (about process scheduling, kernel, etc..)
- DSA questions on two pointer approach, linked list and trees
- Some were asked questions on Software Engineering (Agility, Process models)

ROUND 2:

Round 2 was also a technical round. But for us the interviewer asked us to ask him questions that we wanted to ask a technical guy actively working in the industry. One of the questions I asked was

- I am interested in NLP and want to do projects in the domain. Do you feel that I have good opportunities in the industry to take that as my career?

Others were asked about their projects in the second round. I explained all about my projects in the first round itself.

ROUND 3:HR

Round 3 was a very usual HR interview and the questions were “what are your strengths and weakness”, “Is there anything that you do apart from your academics”, “What will be your mindset when you work as a team for projects?” “How confident are you about getting placed in Wells?”.

I would suggest that it is not mandatory to use the same safe answers available on the internet. That can at times make them feel that you are reciting the answers. You can share your perspectives confidently. Answer with a smile

And finally of the 22 selected for the interview, the company provided internship for 12.

PREPARATION STRATEGY:

I started to prepare for the internship drives only during my 4th semester holidays. I started CP somewhere during the mid of 3rd semester but then I was not consistent at all. So my active preparation started after 4th semester. ACM's documents were the only resource I followed. If possible, find a partner to practice with, exchange your solutions and discuss with them. I think practising in random doesn't work..So follow a schedule starting from arrays, strings and ending with DP and high-level topics. Easy and medium level questions are more than sufficient is what I feel.

Following a schedule is the best tip I can give because we tend to be focussed. ACM's schedule will be helpful. Solve easy to medium problems on each topic and attempt a quiz at the weekend. That is sufficient and you are getting into some top companies. Don't take too much stress. We are never too late to start.

After companies started to come have this in mind,

One thing we can do from our side is to work. If it turns positive, fine else no problem; something big is waiting. Luck also plays a big role in the process. So it doesn't mean your works are not benefitted. Never lose your confidence in any step of preparation. We will work. Something big is always waiting for us!

Always feel free to text, call or meet us for any kind of help! We will work together!
