

Wells Fargo Placement Interview Experience

About the Company

Wells Fargo & Company is a diversified, community-based financial services company with \$2.0 trillion in assets. Found in 1852 and headquartered in San Francisco, Wells Fargo provides a wide range of services including banking, insurance, investments, mortgage, and consumer/commercial finance.

The company operates through more than 8,500 locations, 13,000 ATMs, online banking (wellsfargo.com), and mobile platforms. With a global presence in 42 countries, Wells Fargo supports customers who conduct business in the global economy. The company employs approximately 273,000 team members and serves one in three households in the United States. Wells Fargo's vision is to satisfy its customers' financial needs and help them succeed financially.

About the Role: Enterprise Global Services (EGS)

The role is part of the Enterprise Global Services (EGS) technology team. EGS is a crucial division that enables global talent capabilities for Wells Fargo. It supports over half of the company's business lines and staff functions across four key areas: Technology, Business Services, Risk Services, and Knowledge Services. EGS operates from locations in Hyderabad, Bengaluru, and Chennai in India, as well as Manila in the Philippines. As a member of the team, you interact closely with multiple business and technology partners across various Wells Fargo locations, contributing to a diverse and inclusive organizational culture.

Recruitment Process:

It is a two stage process.

Stage 1

Online Coding Assessment

It was supposed to be on SHL platform but at the last minute it changed to Hackerrank. We had three questions to solve (2 DSA and 1SQL).

DSA questions:

Question 1: Smallest Anagram Period

Description:

You are given a string *input_str*. A string can be formed by repeatedly concatenating anagrams of another *string s*. Your task is to find the length of the smallest possible string *s* that can be used to form *input_str*.

Input: input_str = "abbbaab"

Output: 2

Explanation: The smallest string is "ab". Its anagrams "ab", "ab", "ba", "ab" can form "abbbaab".

Similar Question - LeetCode 459: Repeated Substring Pattern

Question 2: Optimal Stock Investment

Description:

An investor has limited funds saving and can buy at most one share of each company. Given the current stock values and their predicted future values, determine the maximum profit possible without exceeding the available funds.

Input:

saving = 250

currentValue = [175, 133, 109, 210, 97]

futureValue = [200, 125, 128, 228, 133]

Output: 55

Explanation: Buy stocks at indices 2 and 4 (cost 109 + 97 = 206, future value 128 + 133 = 261, profit = 55).

Similar Question - LeetCode 322: Coin Change, LeetCode 474: Ones and Zeroes (classic 0/1 knapsack)

SQL question:

Generate a report of Cloud Virtual Machine (CVM) configurations and count how many times each configuration was deployed in 2021, then display the results sorted in descending order of deployments.

SQL Concepts Used

- JOIN between configurations and deployments (using configuration_id = id).
- WHERE filter to include only rows from year 2021 (using dt).
- COUNT(*) to calculate total deployments per configuration.
- GROUP BY configuration name.
- ORDER BY COUNT(*) DESC to sort by number of deployments.

Stage 2

Interviews at CUIIC, Anna University.

Technical Interview 1: (45-50 mins)

The shortlisted candidates assembled at CUIIC. First round was a virtual one in Microsoft Teams. There were totally 7 panels.

I was asked to share my resume with them, then the interview begun. First the interviewer introduced himself and started asking questions. I was asked to give overview of the projects mentioned in my resume, then he started clarifying his questions on those projects and dug deep on to them.

Python:

- What is a decorator?
- What is flask and how do you handle a request?
- How do you handle JSON data in python?
- Threads in Python.
- Some Basics on Python in my project

DSA:

- Height of the Binary Tree (Easy)
- Frequency of a repeating char in a string (Easy)

React:

- What is the root page of React?
- How does React works?
- How do you manage states in React?
- Any idea on Use Memo?
- How do you use params in React?

Core:

- What are triggers and where did you use in your project?
- Threads and its applications
- DNS Caching
- Caching Techniques
- How do you manage multiple user requests?
- What are the security features that you have implemented in your projects?

- Do you have any idea on cloud computing and deployment?

SDLC:

- Do you have any idea on Software Design concepts?
- Do you know about SOLID principles?
- Have you used any Design concepts in your project?

I managed to answer most of the questions that were asked. I was true on things I don't have a clear idea on. I was asked to wait for the results of the next round. I came out, within 10 mins I moved on to next round.

Technical Interview 2: (20-25 mins)

This interviewer is a cool guy and he is also an alumnus of our college. First he asked me to introduce myself. I delivered what I have prepared. He asked about my hostel life over the three years and my club activities.

Questions:

- Give a travel on your academics over the years.
- What are your favourite subjects?
- What is the difference between AI, ML and DL?
- Do you have any idea on python automation?

I mentioned using python for my regular stuffs hence he questioned me more on those things. I didn't feel like I was in an interview.

Technical Round 3: (10-15 mins)

This was supposed to be a Business Leadership round but we faced only technical questions. I was asked to introduce myself. The interviewer told me to pick one project that I was confident about and asked me present to him. I have done a realtime project and I presented him that.

Questions:

- What are the languages you know?
- Which language you are confident on?
- Why do you use python?
- What type of language is python?
- Can you give me an example of Object Oriented Language?
- What is pure/strict Object Oriented Language?

Preparation Strategy:

I started my preparation on DSA only on summer intern drive and I was not consistent. I would suggest to start as early as you can and be consistent.

Don't wander around materials and many youtube sources. Fix onto one resource.

DSA: As everyone says Strivers Sheet.

SQL: Hackerrank SQL course (Awesome one).

Core Concepts: Your academic books (Yes, they cover in depth which is more than enough). Last minute revision – Geeks for Geeks.

Projects: Know what you have done and why you have done. Even if you feel your project is simple learn everything in it.

Resume: Know everything in it. Don't add stuffs that you are not confident about. It should showcase who you are. Add your leadership and extra-curriculars. This helped me a lot in my interview.

Interview Tips:

Have a clear mind on the day of interview. Practise "*Tell me about yourself*" atleast 5 times. I did it for around 30mins and It boosted my confidence. Be cool, don't frustate. Result is the secondary thing, focus on delivery first.

Have a smile on your face inside the panel. If you are not sure what they are asking or what they are expecting, make yourself clear asking "Could you be more specific sir/ma'am? Or Do you want me to explain on this?". Clarifying makes a good impression.

Learn the values of the company and act accordingly and try to align yourself to it as much as you can.

Prepare questions to ask your interviewer.

It's all in you on what question you can get next. I drove the interview in such manner that my answers can lead to another question that I have an idea on.

For Instance:

In my first round I was asked on, how to calculate the height of a binary tree. I wrote the code and sent the answer in chat in python. Then he started questioning on python.

When I was asked questions on react I told him that it's been a year I have worked on it. So he stopped asking from react.

I told I have used triggers and implemented security features and so he asked questions on them.

Final Note:

Be Confident and Honest.

Luck plays a major role. But only luck won't get you a job.

“Luck Played Hardwork Paid ”
