

Versa Networks

Versa is unique among SASE vendors, providing an end-to-end solution that both simplifies and secures the modern network. Versa [SASE](#), based on VOS, delivers a broad set of capabilities via the cloud and on-premises for building agile and secure enterprise networks, as well as highly efficient managed service offerings. They came for a 6-month internship and FTE role.

Online Assessment

It consisted of Technical MCQs and 3 coding questions.

Coding questions:

1. Easy difficulty – You have been given an array, you have to delete one element. After deleting the element, the difference between the max element and the min element should be maximum. I was able to pass all the test cases.
2. Medium difficulty – It's like finding the nth term of a Fibonacci series with some modifications. Though the question seems to be easy, one case failed and I could not figure it out. So, I was able to solve only 4 out of 5 test cases.
3. Very Hard difficulty – You have been given an array A and array B. Choose any subarray in the array A and sort it. By doing this operation any number of times, we need to find that if Array A can be transformed into Array B. The Brute force solution did not work. I was able to pass only 1 out of 5 test cases.

Interview

Technical Interview 1:

Duration: 45 mins

Questions Asked:

1. Tell me about yourself.

2. Tell me about your projects.
3. Linked list and types of linked list.
4. BFS and DFS traversal.
5. Program to find the height of a binary tree.
6. Query to find the second max salary in the salary table.
7. Query to fetch the data of the first n rows from the table.
8. Joins in SQL.
9. Integrity constraints in DBMS.
10. Basic questions in PHP as I mentioned it in my skills.
11. Basic JavaScript questions.
12. What is Overloading and Overriding?
13. What is Multiple Inheritance?
14. What is Virtual Inheritance?
15. Types of loops in C++. Difference between while and do while loop
16. Find the output of the code snippets.
17. Asked me about my experience in CTF.

Technical Interview 2:

Duration: 45 mins

Questions Asked:

1. Tell me about yourself
2. Tell me about your projects
3. Asked about the SDLC model that I have used while building my project.
4. A matrix-based DSA question.
5. Computer Network Questions
6. Operating System questions
7. Database-related questions.

Result: Selected. Totally, five got the offer from Versa Networks.

Tips:

1. Be strong in CS fundamental concepts like OS, DBMS, CN, OOPS
2. Be good at DSA.

3. Have a clear idea about your projects. You have to answer any questions based on your project.
4. Be strong in any one of the programming languages.
5. Research about the company.
6. Ask some good questions at the end of the interview.
7. Be good at communication.
8. It is okay if you don't answer one or two questions in the interview. They won't expect you to answer all the questions. How you are handling the unknown question matters.

All the best.
