

WELLS FARGO INTERVIEW EXPERIENCE (INTERNSHIP)

Role:

Software Engineer Intern

About the company:

Wells Fargo & Company is an American multinational financial services company with a significant global presence. The company operates in 35 countries and serves over 70 million customers worldwide. Today, Wells Fargo India operates in Hyderabad, Bengaluru, and Chennai. It is considered one of the "Big Four Banks" in the United States, alongside JPMorgan Chase, Bank of America, and Citigroup.

Online test :

The online test was conducted on the SHL platform. It was a proctored test and we were asked to attend the test in IST dept labs. The test consisted of four sections.

The first section consisted of verbal questions. It had twelve questions which had to be completed within 15 minutes which could be answered pretty easily if you had basic English knowledge. You can't move between sections.

The second section consisted of 14 business aptitude questions with a time limit of 25 minutes. Questions were based on stocks and shares, data interpretations based on pie charts, bar charts, graphs. You should be able to solve those easily with basic math. Just don't spend too much time on a question and try to complete all the questions. There is no negative marking and you can't navigate between questions of a section.

The third round consisted of two easy to medium level coding questions with a time limit of 40 minutes. In this section you can navigate between questions.

Driver code will be given. The first question is <https://www.geeksforgeeks.org/area-of-intersection-of-two-circles/> . You have to return the answer rounded up to six decimals.

The second question was simple. You have to return a lexicographically sorted list of repeated words in a given string. You could see how many test cases your code has passed. It was clearly stated that they are expecting a solution which passes all the test cases rather than an efficient code which is partially passing the test cases.

The fourth section consisted of one question which has to be solved in 10 minutes. The question was based on Königsberg's seven bridges. I was only able to solve 1 of the 3 coding questions. More weightage was given to aptitude and verbal than coding questions. You can solve the coding problems in the language of your choice.

22 students got selected for the interview.

Round 1 :

The round started with a standard tell me about yourself question. The interviewer asked me to design a database and write a select query with joins. Also asked me to write any sorting of my choice other than bubble sort and merge sort (because most of the people before me have chosen those 2 algos). I chose quicksort, visualized how it works to the deepest and wrote pseudocode for it. It's okay if you don't know the answers for some questions. At last, the interviewer asked me if I had any questions for him. Be prepared with some questions. Most of the candidates who passed this round were selected.

Round 2:

My experience of this round will be different from my peers. They had technical as well as questions from my resume. This round was completely me asking questions to him. This was the best round of experience that I had in the interview. We were just sharing our thoughts and brainstorming about conducting hackathons (because I mentioned that I have participated in 2 All-India level

hackathons). He even asked me to have some biscuits that were given to him 😊😊. In this round he was just observing how curious I was.

Round 3:

This was a typical HR round. During the interview, I was asked to introduce myself. I mentioned my strengths, technical interests, club responsibilities, and personal interests. The interviewer asked me why I want to intern at Wells Fargo. You just need to let them know that you are a good team player.

After this, 12 candidates were selected out of the initial 22 for internship.

TIPS:

- Be prepared with the DSA concepts.
- Don't panic at any point.
- Being a bit good in communication would really help you in your interview.
- I was not selected in my very first interview, so try until you get it right. 😊

All the best people!...
