

EUCLOID INTERVIEW EXPERIENCE (Intern + FTE)

About the Company:

Euclroid is a premier Data/AI organization that leverages state-of-the-art AI and Data Science technologies to deliver high-impact projects. It creates business-critical solutions for Fortune-100 clients and industry leaders across various sectors, including Hi-tech, BFSI, D2C, Healthcare, SaaS, and Retail. Their deep partnerships with leading platforms like Databricks, Google Cloud Platform, and Adobe enables to build and deploy cutting-edge data products and massive-scale data platforms. Their world-class team, composed of professionals from top-tier institutes and leading global organizations, thrives in an environment that prioritizes growth, innovation, and excellence

Total Rounds:

1. Online Assessment
2. Technical Interview
3. Interview with Leadership Team (Technical + HR)

1. Online Assessment - Virtual :

The first round was an online assessment consisting of 30 multiple-choice questions and 2 coding problems, designed to evaluate candidates' analytical, logical reasoning, quantitative aptitude, and problem-solving skills.

- Logical reasoning
- Quantitative aptitude
- 2 Coding questions -String, Array manipulation -Easy level

2. Technical interview:

All the candidates who attended the online test were invited to the pre-placement talk, where the company representatives provided an overview of Euclroid Data Solutions. The session also featured a virtual appearance by the founder, and we had the opportunity to interact with our seniors currently working at Euclroid.

The list of shortlisted students for the technical round was announced at 11:45 AM — out of 150 participants, **32 were selected**. My technical interview was scheduled virtually through CUIC at 12:30 PM.

The technical interview lasted for around 30 minutes. It began with a brief self-introduction followed by a detailed discussion about my projects. Since one of my projects was deployed, the interviewer asked about the tech stack used, the purpose of using Docker,

and other related aspects. She then assessed my SQL knowledge with conceptual questions such as:

- What is the difference between **RANK** and **DENSE_RANK**?
- What is the difference between **DROP** and **TRUNCATE**?
- What is the difference between **UNION** and **UNION ALL**?
- What is the difference between **WHERE** and **HAVING** clauses?

I explained each question with suitable examples.

Next, I was asked to solve a few **SQL queries**:

1. From the *Employees* table, find departments where the average salary is greater than 70,000.
2. Write queries to:
 - Find the top 3 highest spending customers.
 - Fetch product IDs without duplicates.
 - Retrieve the 2nd highest purchase amount.

I wrote and explained my answers clearly to the interviewer.

The session then moved to the **coding section**, where I was asked to type and run two programs using an online compiler with different test cases:

1. **Majority Element** – (Moore Voting Algo)
Input: [2,2,1,1,1,2,2] → Output: 2
2. **Longest Substring Without Repeating Characters** – (Sliding Window +Hashing)
Input: "abcabcbb" → Output: "abc"

I explained my logic step-by-step and demonstrated the correct outputs. Towards the end, I had the opportunity to ask a few questions about the role, and she responded with detailed technical insights.

With that, the first round concluded, and a total of **10 candidates were shortlisted** for the next round.

3. Interview with Leadership Team (Technical + HR):

The **final round** took place after a day and was conducted by the **Senior Director**. He began the interview by directly diving into my **full-stack project** and asked me to share my screen since the project was deployed online. It was a great opportunity to demonstrate my technical and presentation skills.

I walked him through each page of the project, explaining the purpose, design logic, and technical reasoning behind every feature. He showed keen interest in the functionalities and was particularly impressed by the **customized features** we had implemented.

After the project discussion, he gave me a [Camel and Banana Puzzle](#). I used **MS Paint** to illustrate my approach with a diagrammatic explanation. Before I could reach the final answer, he mentioned that he was satisfied with my reasoning and problem-solving approach.

Towards the end, he invited me to ask questions, and I took the opportunity to learn more about the company's operations, clients, and the type of data-driven solutions they provide.

This round lasted for about **25 minutes** and went very smoothly.

The results were announced two days later, **8 were selected**. I'm delighted to share that **I was one among them**.

RESOURCES:

- **A2Z DSA Sheet by Striver** – for complete data structures and algorithms preparation.
- **NeetCode 150** – for practicing standard coding problems and improving problem-solving skills.
- **Core Subjects** – DBMS, OOPS, Operating Systems, and Computer Networks (refer from *GeeksforGeeks*).
- Be prepared to **explain your projects in depth**, covering your **technical stack, design choices, and challenges faced**.
- **Dry-run DSA questions** using pen and paper to strengthen your conceptual clarity.
- **Maintain concise notes** for last-minute revision before the interview day.
- Conduct Mock interviews
- Above all, **stay confident and face every round with a positive mindset**.

POINTS TO SAY:

This was my **10th interview**, and the journey wasn't easy. I faced several **rejections** — sometimes because I couldn't provide an optimal solution to a hard coding question, sometimes due to topics outside my resume, and a few times for no clear reason at all. I've been rejected in the **first round**, the **second round**, and even after clearing all rounds .

There were moments of **disappointment, self-doubt, and frustration**, but every rejection taught me something valuable.

To everyone preparing — remember this:

“You didn’t come this far to only come this far.”

Keep believing in yourself, trust the process, and never give up.
There’s always something greater waiting ahead
