

Apple SDE Intern - Interview Experience

About Apple

Apple Inc., is an American multinational technology company, founded in 1976 by Steve Jobs, Steve Wozniak, and Ronald Wayne, and headquartered in Cupertino, California. Apple is a global leader in consumer electronics, software, and services. The company is best known for products like the iPhone, iPad, Mac computers, Apple Watch, and AirPods. Beyond hardware, Apple develops software platforms such as iOS, macOS, watchOS, and iPadOS, and offers services including iCloud, Apple Music, and the App Store. The company is renowned for its design philosophy, innovation, and ecosystem integration.

Eligibility Criteria

UG: CS, IT and AI&DS

CGPA: 7 & above

No current arrears

Role: Software Development Engineering Intern

Internship Process

1. Online Test - (Eliminatory)
2. Resume Shortlisting
3. Technical Interview - Webex, Coderpad (Eliminatory)
4. Techno-Managerial Interview - Webex, Coderpad

Online Test

MCQs from DSA, DBMS, OS, OOP and Networks

2 coding questions on Data Structures and Algorithms

26 students were shortlisted for the SDE intern interview rounds.

Technical Interview - 45 min

This round focused on data structures and algorithms, database concepts, and project discussion.

The interview began with the interviewer introducing herself, followed by my introduction. She then asked about the project mentioned in my resume — including how the team was formed, the project's objective, the challenges faced, and how they were resolved.

After that, she moved on to DSA questions, such as explaining a Binary Search Tree (BST) and finding the Lowest Common Ancestor (LCA) in a BST. First, she asked me to explain my approach along with the edge cases, then to implement the solution in CoderPad, and finally to

discuss the time and space complexities. Next, she asked a few questions from SQL. The interview concluded with me asking her a few questions.

After the first round, I received mail for the second round.

Techno-Managerial Interview - 45 min

This round focused on in-depth technical knowledge, projects, and behavioral assessment. The interviewer asked me to introduce myself and then asked questions from every corner of my resume.

Questions from JavaScript and React were asked (as mentioned on my resume). Then he asked me which language I was most comfortable with. I said Java, so he asked questions such as: what is static in Java, why is it used, and if a method is declared static, is an object needed to call it?

Then came questions from my project:

- What is ML?
- Explain the ML project.
- Explain ML algorithms used in the project, why were these algorithms chosen?
- What is Streamlit? Why Streamlit?
- My contributions to the project.
- Then he asked me to explain my other projects in my resume and the tech stacks used.

Other technical questions include: (as I had mentioned them in my resume)

- What is Firebase?
- When is NoSQL used and when is RDBMS used?

From DSA, I was asked to mention some advanced concepts I am familiar with. I said DP, and then he asked me questions on DP.

He also asked about the club I am part of, which I had mentioned in my resume.

Managerial and behavioral questions:

- Why Apple?
- Why you?
- If you are in a team of 2 and the other member is not working on the project, what will you do? Will you report it to the team lead?

The interview ended with me asking a few questions.

10 students were selected for the SDE Internship.

General Tips:

- Know your resume thoroughly; interviewers can ask questions from anything you mentioned.
- When answering DSA questions, first explain your approach and edge cases before starting coding.
- Practice DSA mostly in Java or C++

Materials I used to prepare:

- **DSA:** Striver's A2Z DSA Sheet, Kunal Kushwaha, Abdul Bari, Jenny's Lectures
- **CS Fundamentals:** GeeksforGeeks (Computer Networks, OOP, OS, DBMS)

Keep learning, keep growing, and give your best at every stage. All the best!
