

Verizon Placement Experience:

Name : V.Shreya

Rollno : 2021103578

About the company:

Verizon – an American multinational telecommunications conglomerate, is a global leader in next generation communications technology, including 5G and the Internet of Things. Verizon India (Verizon Data Services India) is an extension of the global Verizon teams working on varied systems, applications and initiatives to help deliver the digital experiences that are vital to customers' lives and businesses' success. As an innovation-hub, Verizon India plays a critical role in both the development of new technologies and the day-to-day operation of Verizon's business. Established in June 2001, Verizon India today has a 7000+ strong, diverse talent pool that operates out of Chennai, Hyderabad and Bengaluru.

The company has been recognized for its innovation, people practices and culture of diversity and inclusion, being featured amongst the top 10 in the 2024 Best Companies to Work list by Great Place to Work Institute, bagging #3 rank among Inspiring Workplaces across Asia, by the Inspiring Workplaces Group, receiving the NASSCOM GCC Award for Innovation Excellence, one of the most Impactful GCCs in India by ETNow, winning six categories at the recent DivHERsity Awards 2023, and being recognized as one of the Top 100 Best Companies for Women in India (Working Mother and AVTAR rankings) to name a few.

Interview Experience:

Round 1: Coding and Aptitude

The first round started with us writing a 190–224-word essay on the topic “How video games help the teachers” this lasted around 25 mins. The next section consisted of 2 coding questions.

- 1) Find whether a number is a weird number or not
- 2) Given 2 arrays (arr,rep) of size m and n we need to maximize the digits in arr with the elements of rep. If arr is empty return NULL else if rep is zero return arr itself.

Example: arr = [1,3,0,2,4,5] and rep = [6,9,7] we need to return arr= [9,3,7,6,4,5]

In the coding round we have extra bonus points for time and space optimization

Then this section was followed by verbal reasoning which consisted of 2 sections which lasted 1 min and 4 min. The pro tip here is to attend as many questions as possible.

The final section is the logical test which didn't consist of the traditional quantitative aptitude and numeric reasoning but instead, cut-e game (Refer YouTube). This includes puzzle numbering games.

Round 2: Group discussion

Only 48 were shortlisted for the above round. We were divided into 4 groups. We weren't given a specific topic to speak about and the topic was our choice. We were evaluated on 5 criteria.

- 1) Fluency
- 2) Ability to lead the discussion
- 3) The way we were able to effectively convey our points
- 4) The validity and the value of points
- 5) Body Language and Attitude.

Out of this only 24 were shortlisted for the next round.

Round 3: Technical Interview

The interviewer was quite friendly. He just introduced himself and asked me to tell me about myself. We had a basic discussion about the project I have done and why I did these projects. A small discussion about my hobbies and extracurricular activities. This lasted about 30-40 minutes

Only 16 of us were shortlisted

Round 4: HR Interview.

This round was simple, where the interviewer asked me about my family background and whether I had any questions for him.

And 15 of us got the offer.

Major Pro Tip:

Work hard and smart

Practise a lot of coding preferably from Leetcode , GFG, Hackerrank, CodeChef, HackerEarth etc etc.

Before you appear for the interview know a lot about the company (do a research)

Make sure you speak fluently without any filler words.

ALL THE BEST

Any Doubts, feel free to reach me out...
