

Fidelity Investments

Fidelity Investments Inc., commonly referred to as Fidelity, earlier as Fidelity Management & Research or FMR, is an American financial services corporation.

Hiring process for internship had 3 rounds:

Round 1: MCQs + coding

The mcqs were based on networks. Operating systems, data structures ,OOPS and DBMS. There were 2 coding questions both of them were easy-medium level and was conducted on HirePro.

Round 2: Technical Round

The questions were asked based on the past projects done so far. In case of a dbms project, they asked for an explanation of the project using entity - relationship diagram. For machine learning projects , the questions were based on the algorithms used and the packages that were used for implementation (pandas.numpy,scikit etc).They also asked whether I maintain those projects on GitHub.

The questions that were asked:

- 1.Anagrams using java
- 2.Difference between interface and abstract class
- 3.Explain joins and its types
- 4.Use of views in SQL
- 5.Difference between soap and rest API
- 6.Multiple inheritance and diamond problem in java

Round 3: HR Round

- 1.Introduce yourself
- 2.The major takeaways from the workshops(if mentioned in the resume) attended.

Hope this helps.

Thank you and All the Best!!
