

My SAP LABS Interview Experience:

About SAP LABS:

SAP (Systems, Applications, and Products in Data Processing) is a global leader in enterprise software, best known for its ERP solutions that help businesses integrate and manage core processes like finance, supply chain, HR, and customer service. Headquartered in Germany, SAP operates in over 180 countries and enables organizations to run efficiently, sustainably, and intelligently

Role: **Developer Associate**

1st Round – Online Test

The first round was an online coding assessment consisting of **two questions**:

1. An **array-based problem**
2. A **tree-based problem**

Both were of **easy to medium difficulty level**.

2nd Round – Technical Interview (Round 1)

From the test, about **90 candidates** were shortlisted for the interviews. My slot was late in the day, and I was called around **4:20 PM**. The panel had **two members**.

Flow of the Interview

- **Self-Introduction**
- **Project Discussion**
 - Explained my project.
 - Questions on **which data structures I used and why**.
 - Asked to **normalize an ER diagram** from my DBMS project.
- **DSA Questions:**
 1. Merge point in a linked list

2. Most frequent letter in a word
 - **Puzzle:** 8-ball puzzle
 - **Club Activities:** Questions about my involvement
 - **SQL Queries:**
1. Using subquery
2. Using joins
 - **My Questions to Panel:**
 - *What are the skills an intern can learn at SAP?*
 - *How does a regular day look like at SAP?*

 Duration: ~50 minutes

Takeaways:

- Communicate with **clarity and confidence**.
 - Keep answers **simple**; don't exaggerate (interviewers ask follow-ups based on your words).
 - Be thorough with your **projects**, as most questions revolve around them.
-

3rd & 4th Rounds – Technical + Behavioral Combined

Since my previous round ended late, my **second technical** and **behavioral** rounds were **combined into one long session (~90 minutes)**.

Panel

- **Senior Architect**
- **Manager**

Flow of the Interview

- **Self-Introduction**
- **Project Discussion**
 - Explained workflow and security aspects.
 - Asked to **draw and normalize an ER diagram** for another project (not the one I had prepared).

- **Technical Questions:**

- API-related concepts
- One SQL query
- DoS attack
- SQL Injection
- OOPs concepts (4 pillars)
- Java (multithreading, garbage collection)
- Indexing
- Deadlock

- **Behavioral Questions (by Manager):**

- *“You say you’re a quick learner and adaptable—can you share a situation to prove this?”*
- *“Tell me about your journey so far.”*
- Teamwork-related questions
- Work-life balance questions

Takeaways:

- Technical: Strong grasp of **core concepts** (DBMS – especially normalization, CN, OOPs, SQL).
 - Behavioral: Be **honest** and always back answers with **real-life examples**.
-

5th Round – HR Interview

The final round was the **HR round**, which lasted about **20 minutes**.

Flow of the Interview

- Self-introduction
- Questions about **extra-curricular activities**
- *“Why SAP?”*
- *“What is SAP?”*
- Discussion on **package**

- *“What will you do if we don’t select you?”*
- Since I mentioned reading books, he asked: *“What was the last book you read?”*

The HR ended with a friendly note: *“Let’s cross our fingers and hope for the best.”*

Takeaways:

- Be **genuine and positive** in your responses.
-

Final Result

Out of **90 candidates**, only **10 were selected**—and I’m grateful to be one of them. 🎉

Overall Key Learnings

1. **Confidence + Communication** are as important as technical skills.
2. Don’t overcomplicate or exaggerate—**simple and clear answers** work best.
3. Be well-prepared with your **projects and core subjects** (DBMS, OOPs, SQL, CN, DSA).
4. For behavioral rounds, **answer honestly with examples** from your experiences.
