

Walmart Global Tech Placement Interview Experience

Role: SDE II

Number of Rounds: 4 (1 online + 3 offline)

Job Location: Chennai/Bengaluru

Job Description: Walmart Global Tech is the technology wing of Walmart corporation. You will work on multiple domains like multichannel supply chain to complex retail systems in the point of sale, finance, logistics and transportation domains. You'll create game-changing solutions / applications using cutting-edge technology and streamline process through innovation. We're constantly reinventing how we save people's money in our retail stores, online and through their mobile devices, and we do it in an unexpected way. Whether you're analyzing data, simplifying the supply chain or creating solutions to make this planet more sustainable, what you'll be really doing is redefining the customer experience and making lives better. You get to work on a wide spectrum of technologies and heterogeneous platforms such as Java, Hadoop, Cassandra, ERP, Middleware tools, low latency messaging systems, machine learning and open-source frameworks

Online Round:

Platform: HirePro

MCQs: 25 MCQs from OS, DBMS and OOPs

Difficulty Level: Easy

Coding Questions: 2 coding questions were asked.

1. A string problem where given a sentence move vowels forward that are followed by a consonant. Don't do anything for vowel followed by vowel, or consonant followed by consonant or consonant followed by vowel. And remove all spaces and special characters after moving of vowels.

Sample input: "hello world! how are y#ou2"

Sample output: hlleowrldohworaeyou2

2. Given a list of integers *nums*, return a list of integers representing the no. of the factors of the each of the element in *nums*.

Totally 14 candidates were selected for next round.

Technical Round 1 (1hour):

Difficulty Level: Medium

I wasn't asked any DSA questions in this round. The interviewer was very interested in my resume, and asked me questions about the skills I had mentioned in my resume. Since I had written Java as a skill, I was asked to write a simple API endpoint which fetches records from a DB. I was asked about my Internship experience, and what I had learnt. Java is not compulsory, but knowing it really helped me through this round, as I was asked lot of questions on Java. Answer honestly about your experiences as you will be tested on it.

10 people were shortlisted from this round.

Technical Round 2 (1hour):

Difficult Level: Medium

In this round I was asked to solve 3 DSA problems.

1. Grouping Anagrams: <https://leetcode.com/problems/group-anagrams/description/>
2. Given a big number, find the max product of k consecutive digits. Return the digits.

Sample input: number = 567893

K = 3

Sample output: [7,8,9]

3. Kth smallest element in a BST: <https://leetcode.com/problems/kth-smallest-element-in-a-bst/description/>

Give the brute-force method first, then give optimized solution. It is done on pen and paper, so you just have to explain your solution as the interviewer wants to see how you solve problems. And be able to calculate time and space complexities.

8 people were shortlisted after this round.

HR Round (10-15 minutes):

In this round I was asked about my projects, and why I chose to do these projects. Then I was asked what do I know about Walmart, and why do I want to work at Walmart.

This round is your chance to show the interviewer that you are really passionate about technology and explain your projects and your achievements.

Finally, 5 people were selected.

My advice:

- Have a very good resume, use standard LaTeX templates. Select your best projects. Include all the skills you have acquired.
- Knowing Java is not compulsory but will be an advantage. I was asked lots of questions on Java, since I had mentioned it as my skill.
- Be confident and comfortable in your answers. Don't exaggerate your skills and be modest.
- Showcase all your interests in technology.
- Be good at DSA and calculating time and space complexities. Give all possible solutions you could think of during DSA round, even if its not optimized. You can discuss with interviewer about different approaches you could think of, and which you think is the best solution.
