

Chronus Software India Internship Experience

Intro:

- > Chronus builds Mentoring softwares for other companies.
- > For our batch(2019 - 2023) internship started by 2nd - 3rd week of August.
- > Chronus came as a 7th company for our internship and we had one Online Round in which students with GPA ≥ 8.5 were eligible and 2 technical rounds and one HR round.

Online Round: - hackerearth platform

We had 10 MCQ's (5 Aptitude + 5 Technical) and 3 coding questions.

- > Aptitude Questions were based on,
 - 1) Permutations - number of possible even numbers from the given digits
 - 2) Number series
- > Technical Questions were based on,
 - 1) Finding Output - For a given code snippet find the output.
 - 2) One DBMS based question.
- > Coding Questions,
 - 1) Given a square number(n), print the numbers from 1 to n in a spiral form. This was like <https://www.geeksforgeeks.org/print-a-given-matrix-in-spiral-form/> .
 - 2) Given an event which will be happening for 'n' days and there are 'm' queries which is of the format " s,v,p" such that on each day 'p' number of visitors will be arriving with a pass which will be valid for 'v' days from the date 's' (starting date) .
We need to find the maximum number of visitors visited on any of those 'n' days. This was like <https://www.geeksforgeeks.org/difference-array-range-update-query-o1/>.
 - 3) This question was similar to <https://www.spoj.com/problems/AGGRCOW/>.

Technical Interview Round - 1: hackerearth platform

9 students were shortlisted for the interview Round - 1.

- > This round had only one coding question - Finding the number of 1's in the non - increasing binary array - <https://www.techiedelight.com/find-number-1s-sorted-binary-array/>
- > For this question the interviewer asked me to explain with some test cases for all the possible solutions (linear and binary search) which I gave .
- > Also interviewer asked two HR's questions,
 - 1) Where do you see yourself in 3 years?
 - 2) What is your favourite subject?

Technical Interview Round - 2: hackerearth platform

This Round had only 2 coding questions.

1) Finding the Largest sum of 2 numbers in the array(non-sorted and non-negative elements).

Follow Up problem) Generalisation for the sum of k largest elements in the array , k elements need not be contiguous.

2) Next higher Value possible for the given number . We must use the digits in that given number and form the next higher value. e.g) "45" - "54", "123" - "132" , "4678" - "4687", "654" - same number because it is the highest possible value with the given digits, "987" - "987", "59876" - "65789".

For the first question, the interviewer asked me to write the pseudocode and for the second question, he only asked me to write the algorithm.

HR Round : hackerearth platform

This round went for around 10 - 15 minutes. It was shorter as compared to the previous two technical rounds which happened for around 45 minutes and 60 minutes.

The interviewer asked some questions like,

-> Favourite Domain.

-> Things that I learnt in the previous rounds .

-> How would I define the success of this internship (after completion).

-> Activities I do in my free time.

Learnings and Takeaways:

-> **Keep your expectations to zero.**

-> Stick to your strengths and reduce your weaknesses.

-> **Minimize your negatives and mistakes** done in your previous interviews and online rounds and try to solve those questions for which you did not find the solution.

-> Have good knowledge in DSA, DBMS, OS,OOPS.

-> Ask out for help from your seniors and friends when you get stuck(not during the test :)).

-> Interviewer will also help you when you get stuck.

-> Prepare for some standard HR questions.

All the best!
