

APPIAN INTERVIEW EXPERIENCE

Role: Software Engineer

Appian Corporation is an American cloud computing and enterprise software company headquartered in McLean, Virginia, part of the Dulles Technology Corridor. The company provides a **low-code platform** for building enterprise applications, focusing on process automation, case management, and business process management in regions like North America, Europe, the Middle East, and Southeast Asia.

The platform allows businesses to develop apps with **low coding**, using a visual interface and prebuilt modules.

Online Assessment

The online assessment consisted of **3 coding questions** to be solved in **1 hour 30 minutes**. The **timestamp of submission** is considered during evaluation, so solving faster is an advantage.

1. Insert Interval - [Leetcode](#)
2. Find first and last position of element in sorted array - [Leetcode](#)
3. Find missing and repeating – [GeeksForGeeks](#)

Important: Plagiarism check is done by AI.

Shortlisting Process

The shortlisted candidates list was released **one day before the interview**.

Be ready with:

- Updated Resume 3 copies
- DSA, DBMS, OOPS
- Real-time puzzles

Interview Rounds

There were three rounds, each an **elimination round**.

Technical Round

Never lie in your resume

every word in it can become a question.

The interviewer spent about **2 minutes** reading my resume and simultaneously generating questions based on it. Meanwhile, I gave my self-introduction.

Questions I Faced:

1. React:

- Implement a list in a React functional component.

2. Project Discussion:

- I had mentioned three projects — he asked about every single line in the descriptions.

3. API Questions:

- Explain what an API is.
- Types of API and their purposes.
- Additional: Explain about **API fire/hit rate**.

4. Project Purpose:

- Asked for the purpose of my project — I explained clearly.

5. Certification-Based Questions:

- I had listed Oracle SQL credential by IBM in my resume.
- What is the difference between schema and table?
- In DBMS, a many-to-many relationship can be resolved into how many tables? (Answer: 3 tables)
- Write an SQL query to select the highest CGPA from each department (he gave me the table schema).

6. LeetCode Experience:

- I mentioned **480+ problems solved**.
- Preferred language? → C++
- Most interesting problem solved? → I explained constructing a binary tree from inorder and preorder traversals.

LeetCode Link: [Construct Binary Tree from Preorder and Inorder Traversal](#)

7. DSA Question 1:

- Get non-duplicated elements from a given array containing integers (both duplicates and uniques).
- Explained my approach and wrote the code. [unorderedmap]

LeetCode Link: [Single Number](#)

8. OOPs:

- What is polymorphism? → Explained with a real-world example.

9. Security in Project:

- How did you encrypt the password during login?
- Write the JSON format for an image.
- Explained about Firebase authentication email verification.

10.DSA Question 2:

- A modified Two Sum problem (scenario-based).
- Only after solving it, I realized it was LeetCode's Two Sum problem.
- **LeetCode Link:** [Two Sum](#)

HR Round

- Questions were similar to the technical round, with more focus on:
 - My projects
 - DBMS basics
 - Academics
- Many-to-many relationship table conversion was again asked.

Key Takeaways

- Never lie in your resume — be prepared for any question based on it.
- DSA + DBMS + OOPS are must-prepare topics.
- Be ready to explain every project you mention.
- Have knowledge of API concepts and real-world scenarios.

- Solve LeetCode problems regularly — they may appear with slight modifications.
- **CGPA** plays a vital role in the shortlisting process.

My tips to juniors....

Prepare well.

When asked "**Tell me about yourself**", speak clearly and confidently. Also, know about the company — their goals and the new steps they are taking.

While solving DSA problems, keep speaking continuously. Talk about your approach, explain whatever you are thinking, and share what is running through your mind about the problem. Don't let the interviewer search for the next question — keep the conversation active.

Highlight the novelty of your project, its purpose, and the target consumers of your project. Have these points at your fingertips.
