

SAP LABS

Rounds and domains for the interns selection.

Round 1: Technical & coding questions

Consisted of a select number of technical questions and two coding questions of varying difficulty on OOPS concepts, Data Structures like arrays, trees, linked lists and also focussed on DBMS.

Round 2: It consists of 3 Panels(Technical 1, Technical 2, HR)

Technical Round 1:

1. Introduce yourself?
2. Gave a scenario e.g., Student teacher online assessment system and asked to draw an ER diagram on it and asked questions based on what I drew. Then asked me to write queries [Keen on small details].
3. Gave 3-4 questions on arrays and linked list after he made a note of what languages I was good in.

Overall he focussed mainly on basic technical concepts and quizzed on them.

Technical Round 2:

In this round, the interviewer focussed on what projects I did and the domain I was interested in exploring. He then asked me basic questions on machine learning[what I said], and then 2-3 technical questions to solve[with and questions like what data structure would be suitable for different scenarios and how it is currently implemented and how we can upgrade that.

HR:

The HR round was very casual as compared to other rounds. They are just trying to get to know more about yourself and also wanted to have a slight idea about our communication and team skills.

1. Why Sap Labs?
2. About the relocation(yes/no)? I said Yes
3. Hobbies, personal interests, etc.
4. How to work in harmony with the company etc.
5. Team building skills etc.

Topics to be focussed:

- ◆ Data structures
- ◆ Database management systems
- ◆ Basic Concepts like OOPS, pointers etc.

Take away:

Having a good knowledge of basics, coding and confidence will help to be placed in this company.

Hope this helps.

Thank you and All the Best.
