INTERNSHIP EXPERIENCE

Accenture is a Fortune Global 500 company and a leading multinational professional services firm that empowers businesses, governments, and organizations to enhance their digital infrastructure, streamline operations, and accelerate growth. Leveraging cutting-edge technology, including cloud, data, and AI, Accenture drives transformative change with strong ecosystem partnerships and unmatched industry expertise.

Their services span Strategy & Consulting, Technology, Operations, Industry X, and Song, enabling them to deliver comprehensive solutions at speed and scale. Guided by a culture of shared success and a commitment to creating 360° value, Accenture builds lasting, trusted relationships with its clients worldwide. For more details visit www.accenture.com.

Internship Selection Process:

The selection process involves four rounds.

Round 1: Cognitive and Technical Assessment

This round evaluates logical, analytical, and coding skills through a **90-minute** test consisting of **90 multiple-choice questions**. The sections include,

- English Ability
- Critical Reasoning and Problem Solving
- Pseudocode (determine output from a given pseudocode)
- Common Applications and MS Office
- Networking Security and Cloud

There is no negative marking, but this is an elimination round. Successful candidates receive an email on the same day to proceed to the coding round.

Round 2: Coding Assessment

This round requires solving **two coding problems** within **45 minutes** using one of the following languages: C, C++, Java, or Python. The questions typically range from simple to medium difficulty, with a focus on topics like vectors. This is also an elimination round, and qualified candidates receive an email about moving to communication assessment.

Round 3: Communication Assessment

This round, conducted 3–4 days after the coding assessment, evaluates communication skills. This round takes over **25–30 minutes**. A calm, noise-free environment is essential as the system detects background sounds. Although it is not an elimination round, strong performance is crucial.

This assessment consists of

- Reading: 8 questions
- Listen and repeat: 16 questions
- Questions (this or that type): 24 questions
- Sentence building (listen to jumbled sentence and reform it): 10 questions
- Story retelling: 3 questions
- Open questions: 2 questions

Round 4: Interview

The final round involves selecting an interview slot. The interview is **1-on-1 round** and typically lasts **15–20 minutes**. Communication skills and confidence plays a major role in interview. The questions asked to me are as follows,

1. Introduce yourself.
2. Tell me about your project.
3. Did you face any conflicts during your project?
4. How did you overcome those conflicts?
5. What is your least favourite subject?
6. Have you interacted with IT professionals?
7. If given the chance to interact with IT professionals, what would you ask or learn from them?
8. When did you felt that you are failed?
9. Do you have any questions for me?

Also focus some of the basic foundation topics in computer science.

Out of 60-70 students attending interview, 5 got selected for the internship.

Take away:

Having a good basic knowledge of coding, theoretical concepts, and communication skills helps you to succeed.

Hope my experience helps you.

Thank you, all the best for your future goals.
