

VIVRITI CAPITAL PRIVATE LIMITED

Vivriti Capital is a FinTech company. It is a marketplace that brings together capital markets investors with institutions, small enterprises and individuals. It started with a mission to offer efficient and customized financial solutions to individuals, enterprises and institutions.

There were 3 rounds in the interview process

- A. Online test
- B. Technical interview – 2 rounds
- C. HR interview

A. Online test

20 MCQs and 2 coding questions

MCQs from DBMS, OS, Data structures.

Coding questions based on graph.

B. Technical interview

Round 1:

1. Introduce yourself.
2. I was asked to explain a particular project from my resume.
3. I was asked to code for the following questions:
 - i. Find the triplets in the array – Adding three numbers should give zero.
 - ii. There are a series of buildings in a lane with different heights. Find which are all the buildings which will experience sunrise and sunset (considering the heights and shadows).
4. Normalization in DBMS.
5. Difference between delete and truncate table in DBMS
6. Explain the ACID properties in DBMS.

The interview went for around an hour. I answered all questions and I was called for next round.

Round 2:

1. Find the different methods to solve the problems, analyse the time and space complexity and provide the optimal solution.
 - i. Given an array of elements each present twice whereas one element is present only once. Find the element.
 - ii. Given an array of prime numbers in which one element is duplicated. Find the element (using prime number properties).

2. Difference between process and thread (real life example).
3. Normalize a schema. (A student detail database)

The interview went for around 1.15 hours. I had few ups and downs in the interview but it was a very good experience.

C. HR interview

1. Introduce yourself.
2. What are your hobbies?

Told me I was offered a job.

Topics to be focussed:

- Data structures
- Database Management Systems
- Operating systems

Take away:

Whatever we learn, learn it completely. This was a major take away from my placement experience.

Experience from previous interviews:

1. Apart from all the coding and concept learning, good aptitude skill plays a major role and in some interviews, I was asked to print the given pattern using arrays, it doesn't require any deep concept learning, it just depends on the thinking. Take your own time and practice more problems. Solving problems in geeks for geeks and leetcode helped me.
2. All it takes is a positive and learn from mistakes attitude.

Thank you.

All the best.
