Selection Process:

The Selection Process Involves 5 Rounds

Round 1: Aptitude with Programming Assessment

This Round consists of 20 questions (not in MCQ format you've to fill the correct answer) which covers Basic Aptitudes, Mathematics, Pseudocode (determine the output)

Round 2: Problem Solving

They've given 2 DSA questions based on the solution they allow you to solve the next 3 DSA questions. And the questions are,

1. Print the following Pattern:

Sample Case:

5

Output:

1

3 2

6 5 4

8 7

9

2. Non-Consecutive Fibonacci Sum:

Given a number N, find the minimal no of Fibonacci numbers whose sum equal to the given value, but exclude consecutive Fibonacci numbers from the sum.

Sample Case:

30

Output:

21 + 8 + 1

3.Sort By Square Values:

Given an array of integers (potentially negative), return the same elements but sorted based on their square values.

Sample Case:

[-4, -1, 0, 3, 10]

Output:

[0, -1, 3, -4, 10] (squares => [16, 1, 0, 9, 100])

4. Date Difference Calculator:

Calculate the difference between two dates and display the result in years, months, and days format.

Sample Case:

From: 01-01-2000

To: 31-10-2025

Output:

25 years, 9 months, 30 days

5. Given a Entry and exit Logs find the maximum number of workers inside

the office at a time:

Input Format:

1st Line: N (No of Persons)

Next N Line: entry_time exit_time

Sample Case:

4
1 5
2 7
3 8
6 9

Visual:

0 1 2 3 4 5 6 7 8 9

it's a slight modification of [Minimum number of platforms required for a railway](#)

NOTE : They are only allowed to use C, C++, Java. Python is not allowed.

Round 3: Long Coding

Problem Explanation:

Design an inventory management system for an organization that purchases products from vendors, stores them in a warehouse, and sells them to customers. The system maintains two lists: a purchased list (orders from vendors) and a sales list (orders to customers).

Each order has a status attribute with a default value of "paid". When a purchase order's status changes to "received", the warehouse stock quantity must **increase**. When a sales order's status changes to "delivered", the warehouse stock quantity must **decrease**. This status-driven mechanism ensures real-time inventory synchronization based on order fulfilment events.

Additional Functionalities:

- 1.Total Stock Holding for Each Product
- 2.Record of Orders Purchased from Vendors
- 3.Record of Orders Delivered to Customers

4. Number of Orders to be Received from Vendors
5. Number of Orders to be Delivered to Customers
6. Details of Orders Placed to Vendors Within a Date Range
7. Details of Orders Placed by Customers Within a Date Range

They assessed only how you approach the problem rather than implementation. For me, they asked to design a database with normalized. Start with a low-level class diagram and explain your thoughts to them, making sure to interact with them frequently.

Round 4: Technical Interview

Duration: 40 – 50 Mins

1. Started with Tell me about Yourself
2. And he asked me to explain my Projects
3. Why did you choose this problem statement?
4. Why did you choose these tech stacks?
5. What are the Programming languages you are familiar with?
6. What do you know about Zoho?

Round 5: HR Interview

Duration: 30 – 45 Mins

1. Give a brief introduction about yourself
2. Explain any one of your projects.
3. If you are assigned to a project and you are the leader, what are the steps you would undertake?
4. Do you have plans for higher studies?
5. If we put you in some other location, will you be able to work there?
6. What is your expected salary?
7. How many Interviews have you attended before Zoho?
8. How many offers do you have in hand?
9. How long will you be in Zoho?

NOTE :

Try to interact with the interviewer frequently during both rounds 2 and 3. and give your optimized solution for the round 2 which plays a crucial roll during the entire process
