

VEGROW INTERVIEW EXPERIENCE

(INTERNSHIP)

Vegrow, India's leading B2B fruits marketplace was established in 2020 by IIT alumni. Vegrow has established a strong presence in the fruits segment in India, which is a large, unorganised market that is poised for tech-led disruption due to its fragmented and localised operational structure and is characterised by the involvement of multiple intermediaries facilitating transactions.

The company maximises farmers' income, by accurately grading produce and efficiently matching it with the most suitable demand channel. This creates a virtuous cycle, attracting more farmers through competitive pricing as well as more buyers, who seek consistency in both price and quality.

ROUND 1:

Online Hackerrank Test :

It consists of three coding questions and an sql query to be written.

0/1 Knapsack Problem - The objective was to maximize the profit from selecting artifacts for a caravan with a strict weight limit. Given the profit values and weights of the artifacts, I needed to determine the maximum profit achievable without exceeding the weight capacity

Best Time to Buy and Sell Stock - The task was to determine the maximum profit that can be achieved by buying a crop on one day and selling it on a later day, given an array of prices representing the crop prices over several days.

Candy Distribution problem - To calculate the minimum number of rewards (or candies) to distribute among fields based on their productivity ratings, ensuring that higher-rated fields receive more rewards than their adjacent lower-rated fields.

SQL - SQL query problem where I needed to retrieve the names of students who scored higher than 75 marks. The results were ordered by the last three characters of their names, and if there were ties, they were further sorted by the student ID.

From the test 10 students were shortlisted and eligible for the Interview Conducted at CUIC and there are 2 Technical interviews.

ROUND 2:

TECHNICAL INTERVIEW-1 : (1 hour)

1. Introduce Yourself
2. Can you write the pseudocode for the knapsack problem using recursive method.
3. The syntax of SUBSTR which I used to write my sql query on coding round.
4. They asked about my project.
5. What are the frameworks you know in both frontend and backend.
6. Gave Laptop and told to write merge two sorted linked lists program in Hackerrank.
7. How do you find whether a number is an exponent of 2 using bits.
8. There are 12 balls. 11 balls are of same weight and there is one odd ball which may be either lighter or heavier when compared to other 11 balls. You have a weighing scale and you can use it 3 times. How do you find the ball and also specify whether it is lighter or heavier than others.
9. What is Ternary Search and write its pseudocode.
10. Any idea to study Higher Studies.
11. They asked some questions on my Resume.

From this round 5 students got shortlisted for the next round.

TECHNICAL INTERVIEW-2: (20mins)

1. Tell me about yourself.
2. There was a Scientist and he has 4 bottles, of which 3 are chemicals and 1 with poison. He has 1 rat alone which dies when it consumes poison. The result of the poison makes the rat die after 10 hours.

What is the minimum time required for the scientist to find the poison bottle.

For the same question if it takes 10 +/- 2 hours to affect the rat what is the minimum time required for the scientist to find the poison bottle.

3. Write the pseudocode to print the boundary of the tree.
4. How do you find the loop in linked list.
5. Why fast pointer is moved two nodes from the current why can't it can move three nodes while finding the loop in linked list.
6. Did you host any website? Show it.

And finally 3 students got selected for the internship.

ALL THE BEST!
