

SAP Labs – Internship

About the company:

SAP stands for Systems, Applications & Products in Data Processing. SAP is the largest non-American software company by revenue, the world's third-largest publicly traded software company by revenue, and the largest German company by market capitalization. SAP Labs India is SAP's largest Research and Development centre outside its headquarters in Germany and a part of a connected lab network of 20 Labs in 17 countries.

Originally known for leadership in enterprise resource planning (ERP) software, SAP has evolved to become a market leader in end-to-end enterprise application software, database, analytics, intelligent technologies, and experience management. It is a top cloud company with 200 million users worldwide. SAP Labs India drives SAP's product strategy and is responsible for SAP core solutions and provides product localization and India specific solutions. It is one of the earliest R&D centres of a global company.

Coding round:

Number of questions: 2

Duration: 45 minutes

Platform: AMCAT

Each of us got different questions. Both of my questions were based on string manipulation. I coded using C++. The first question was given a sentence which is the set of words searched in a dictionary I had to return the words that are to be stored in a dictionary which is basically the count of words greater than one. The second question was given a string I had to return the string after removing the vowels.

Around 500 students attended this round out of which 15 students were shortlisted for the next round.

Technical round 1:

Duration: 1 hour

Platform: MS Teams

I was asked to introduce myself. Then I had to screen share and code on my notepad. The question was, given a linked list I had to reverse it and print. Then I had to explain my projects. After explaining I got a lot of questions regarding that. Then I was asked to explain about joins. I had to write a query for a given situation. Query was based on joins, order by and group by. Next, I was asked about OOPs. Then I was given a code and asked to predict the output and explain the code based on the OOPs concept. Lastly there were a few DSA questions.

15 students attended this round and 8 were shortlisted for the next round.

Technical round 2:

Duration: 45 minutes

Platform: MS Teams

I was asked to introduce myself. Then I was asked to screen share my notepad and code. The question was given a month I had to return the season. I was asked to code the entire program. Then I had to explain my projects. I went for my DBMS project. Next, I was asked to explain the entire OOPs concept. And there were a few DSA questions about arrays, linked lists, trees and graphs. Then I got one debugging question. From Operating Systems Questions were from Paging, Segmentation, Fragmentation, Multithreading and Multiprocessing, Threads, Processes, Memory Management and Scheduling. Lastly, I was asked a puzzle.

HR round:

Duration: 15 min

Platform: MS Teams

This round was a casual conversation with the interviewer. I was asked to introduce myself and explain the projects. Then I had to narrate my experience with this virtual hiring process. Then I was asked which location I would prefer to work and why I would like to work for SAP Labs. Finally, they asked, if I had any questions for the interviewer which was asked in all the rounds.

Out of 8 students, 6 were offered the internship.

Note:

- The first thing is to answer confidently. Even if you don't know the exact answer take them through your thought process.
- Don't fake your resume and be clear about what you put in your resume.
- I had to code the full program both in the coding round and in technical interviews. So, make sure you are prepared for that.
- Cover all the concepts of DBMS, OOPs, OS and DSA. You can ace the technical interviews.
- When it comes to HR round research about the company, never fail to do that. It would create a good impression on the interviewer if you know about the company.

Thank you and all the best!!
