

Citi Services India Pvt Ltd (Citi Bank) – Citicorp - Intern (2026 Batch)

About the company:

Citigroup Inc., commonly known as Citi, is indeed an American multinational investment bank and financial services corporation. Citibank, N.A. is the primary U.S. banking subsidiary of Citigroup, a financial services multinational corporation. Citibank was founded in 1812 as City Bank of New York, and later became First National City Bank of New York. The bank has branches in 19 countries. Its headquarters are in New York City. Citi operates globally, offering a wide range of financial products and services to individuals, corporations, governments, and institutions. In India, Citi has established Citi Solution Centers, which are specialized centers focused on technology, processing, analytics, and financial processes. These solution centers play a crucial role in supporting Citi's operations and providing various services to its customers.

Role that I chose: ICG (Institutional Client Groups)

Another Role which was available: Personal Banking & Wealth Management Technology (PBWMT)

Selection Process:

The selection process consists of three rounds

1. Online Round
2. Technical Interview
3. HR Round

1) Online Round:

You should focus on mastering array-related questions, but learning other topics will also be beneficial. I was asked to answer DBMS query-related questions, and since I chose the ICG role, I encountered MCQs on React JS and Angular. The difficulty level of the questions was generally easy to medium.

2) Technical Interview

“Don’t lie on your Resume!!!”. Most of the candidates who got into this round were questioned by only one panelist, and their questions were mostly based on the projects specified on their resume. If you are provided with a problem don’t just provide them with your answer, drift your way through your entire thought process on solving it. Exceptionally on my case, I was questioned by two panel members and the questions were asked from all fields which includes

- Project – Be thorough with your project
- Data Structures (You can specify the data structure that you are confident with) – I chose array, stack, queue, BST, Heap. They asked me to reverse a queue using just the queue which can be done recursively. And some basic question followed by.
- React – User Authentication
- Computer Networks – How responses are handled in case of a query and what method will be used in each step, GET & POST
- Operating System – How is a program compiled in accordance with OS, mutex, semaphores, etc....
- DBMS – Some queries.
- OOP – Inheritance, generalization.
- Recursion
- Logical Question – There is a section in Geeks For Geeks where you can find similar questions. The question that was asked to me was “Rabbit can lie on Mon, Tue, Wed. Tortoise can lie on Thurs, Fri, Sat. Today Rabbit says that it lied yesterday. Tortoise replied to that by saying ‘So am I!’ What is today?”
- Basic problem-solving question.

We were asked to do every solving in a paper, even the user authentication using REACT.

3) HR Round:

Gather all available information about the company and thoroughly understand the role. Review the job description shared on the CUIIC portal. Ensure you're well-versed in the details provided during the Pre-Placement Talk. Be ready to answer common interview questions confidently, as they'll assess your preparation and planning for both short- and long-term career goals. Make sure to communicate your ideas clearly and confidently.
