

Citi – Intern Interview Experience

About the company

Citi is a global bank that offers a variety of financial services, including banking, credit cards, and investment solutions. It operates in more than 160 countries and values innovation, diversity, and teamwork, creating an inclusive workplace where employees can grow. Citi's mission is to help people, businesses, and communities achieve their financial goals.

Role: Application Developer (App Dev)

Stipend: 75,000 INR per month

Duration of internship: 8-10 weeks

Selection Process :

The Selection process had 3 rounds.

1. Online test
2. Technical Interview
3. HR Interview

1. Online test (12.10.25)

This online test had coding basically.

- 1st question - Temperature_Check
- 2nd question - Shortest_Unique_Substring
- 3rd question - Largest_Square

The first question was very simple. We can solve it just by using a switch statement. The problem was like the user gives a temperature value , we have to determine the range of it and return the comments given as per the question.

The second question was simple. It was similar to the problem [Shortest Unique Substring](#).

The third question was like creating a algorithm for the given question which was in medium difficulty . I could not remember the question exactly .

As the test was in online, completion time was one of the factor for getting shortlisted for the interview .

2. Technical Interview (05.11.2025)

A total of 82 students from CEG and MIT was shortlisted for technical interview. Both HR and Technical interviews were in-person interviews which held at CUIC, CEG.

The interviews were conducted in the Auditorium of CUIC, with students being randomly assigned to each panel. All panels had a two interviewers. Randomly, I was assigned to the most difficult panel.

After greeting the interviewers, I handed them my resume. The interview began with the interviewers introducing themselves, followed by them asking me to introduce myself.

Be prepared with the self-introduction as it makes the first impression. I started off with the self-intro as instructed. As I had mentioned about my extra-curricular activities explicitly. We had a conversation about my cricketing journey for 2-3 minutes.

After reviewing my resume, they told me that they weren't interested about the projects that I had put on my resume as all the people who attended the interview was having similar kind of projects using MERN stack, DBMS etc.... So, they told me that they are moving to the fundamentals of CS(OS, OOPS, DBMS, Networks and Data Communication), and about programming languages mainly JAVA.

He first started asking questions about JAVA

- What is JVM?
- Difference between JVM and JRE.
- How does the compiler compile the .java file ? and he asked me to explain the flow of control.
- What compiler is used in JAVA?

Then he moved onto DBMS where the questions were

- He gave me a description about the table schema and I had to create a table for the description which he gave and write it down on a paper. After writing he checked it.
- He asked me to create an index for a column in that table and asked me to write it down.

Then the interviewer moved onto OS

- He asked me about the concepts of OS and I explained him about the concept.
- He asked me whether I am familiar with Linux OS.
- He asked me to explain some Linux commands using an example with its usage

Then he moved onto OOPS

- He asked me about Polymorphism .
- I was asked to write the code for Static polymorphism and he checked it.
- Then he asked me to explain Run-time polymorphism.
- In inheritance he asked me a question stating that “Class A has a numerous methods. Class B is inherited from Class A. Now I have to access the class A’s method using the object of class B. Is it possible?”. And he asked me to write the code of that particular line.

Then he moved onto Full Stack

- What is frontend and backend?
- How to frontend and backend communicate with each other? And I was asked to write the code on the paper and explain him.
- He gave me a situation that, “The API from frontend transmit the data to the backend and the API that should catch it is down. What would happen?”. I replied him and he asked “What kind of error type and number ?”. I answered the question and he asked “Why not 404?”. I explained him and he gave many code asked me find out where it is used.

The second interviewer was listening to me till then and he asked a question about the working of MySQL in the backend like how does the query “Select * from “ takes the records from the table and what data structure is during the retrieval process of the query. He asked me to try and explain it. I told my approach using trees(B trees) and he asked me “why not graph ?”. So I changed my approach using the Graph using BFS and DFS. Then I was asked to explain about the BFS process.

Finally, both the interviewers were satisfied my answers and they gave me a chance to ask them questions.

The first round (Technical round) got over. It was around 1 hr.

Everything depends upon the interviewer. Some interviewers asks less questions. While some of the interviewers go in depth about your project and the fundamentals. So be prepared for both.

2. HR Interview (05.10.2024)

From the 82 students who were qualified for technical round, 30 were selected for the next round (HR).

It was a one-to-one interview. Since she had a copy of my resume on her hand, I didn’t hand over my resume. She began with her introduction, and then I followed with my own introduction. When I mentioned my extra-curricular activities, she was impressed with it and I also added my 12th mark which impressed her more.

I was asked questions such as “Where do you see yourself in 5 years? “,then she enquired about my parents details, my CGPA, any current backlogs, some family details and whether I had any idea of higher studies.

She asked me if I had any questions. With this the HR round of interview came to an end. This round lasted for about 10 minutes.

Out of 30 people, 12 were selected for App dev intern role, and by god's grace I was one among them.

All the best!
